Back in the early 90's one of our founding partners, Justin Sandalls, qualified as a Garden Designer and Landscaper prior to the forming of Forrest Garden Design, a Landscape and Garden Design and Build Business. Since then he and a growing team of associates have gained many years of experience in landscape design primarily working in the South of England and London where the team have gained a high level of skill in Design, Project Management and Construction. At Forrest Garden Design we provide residential and commercial clients in the Southern Counties and London with a full design, project management and planting service. We take a cooperative approach, developing the design together with our clients, tailoring the service according to their taste, needs and budget. We work with, and project manage, a small number of landscaping contractors to provide clients with a high quality service suited to the requirements of their individual garden design. We source plants from specialist nurseries and can also provide sculptures, water features, bespoke furniture and dynamic lighting to provide the finishing touches to our designs. We can also design, source and build swimming and spa pools.
