

Small garden scheme

At Forrest Garden Design we believe that garden design should be hassle free and affordable, for this reason we are introducing our new small garden scheme.

The small garden scheme is aimed at new homes or small gardens which are like a blank canvas, very little clearing to be done just take up the crappy turf that the builders have put down. For this reason we can design from generic plans using typical materials, plants and build the garden very quickly.

The design process is much shorter very much like choosing a kitchen and we will provide a 3d visual of how the garden will look when completed, we will do a plan for our teams to work from but there is no need for complicated construction plans and fancy presentation plans as they are generic designs which are tried and tested.

The build process is much quicker because there is not much needed to prepare the site and this means we can get straight on with the build. We will project manage the work to make sure it turns out the way you intended. Most gardens can be completed from start to finish in a week to two weeks depending on size and materials.

This scheme makes garden design and build easy for the client and for us, prices typically start from £7000 depending on the site and what design you choose.
